

Perspective: ... more things we have to do!

- test other feedback loops of the integrative framework
- refine the existing BPE tools + develop new ones
- focus on possibilities for standardization

Benefits of design review

- fine-tuning of designer’s solution with user requirements
- clarification of program priorities
- strengthening of design principles

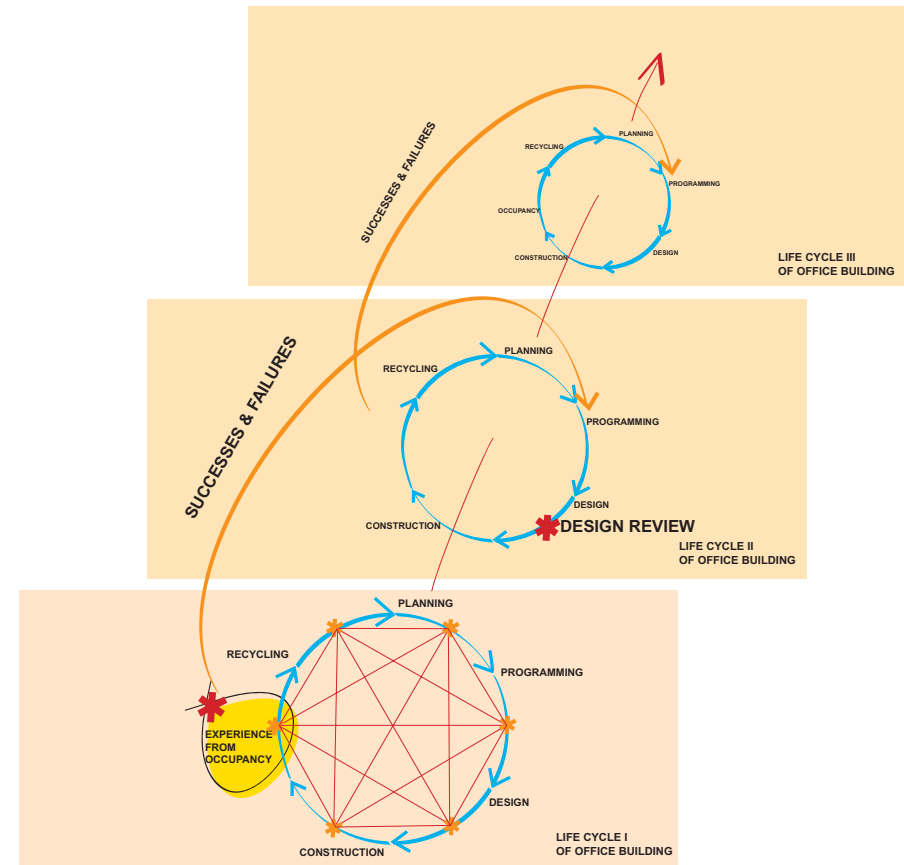

Summary: better R&D center II through BPE

- integrative Framework proves to be right
- lessons can be learned from existing facilities
- internal reviews + feedback loops are beneficial

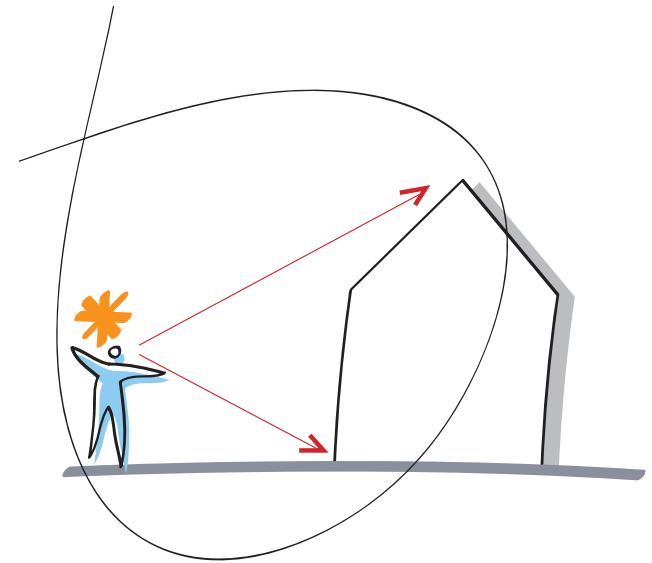

Integrative Framework as conceptual basis

- consider the whole building life cycle
- take an evaluative stance
- feed knowledge back & forward for better buildings

Goals of presentation

- to report about 'Design Review' of ongoing IBPE case study
- to demonstrate a 'real world' application of BPE method
- to point out the next steps to do within the IBPE project

**Evaluation
of Intelligent Office Buildings
in the Cross-Cultural Context:**

**Design Review -
Another Feedback Loop of the Integrative Framework
for International Building Performance Evaluation (IBPE)**

by Ulrich Schramm, Ph.D.
