

Deploy to Grading

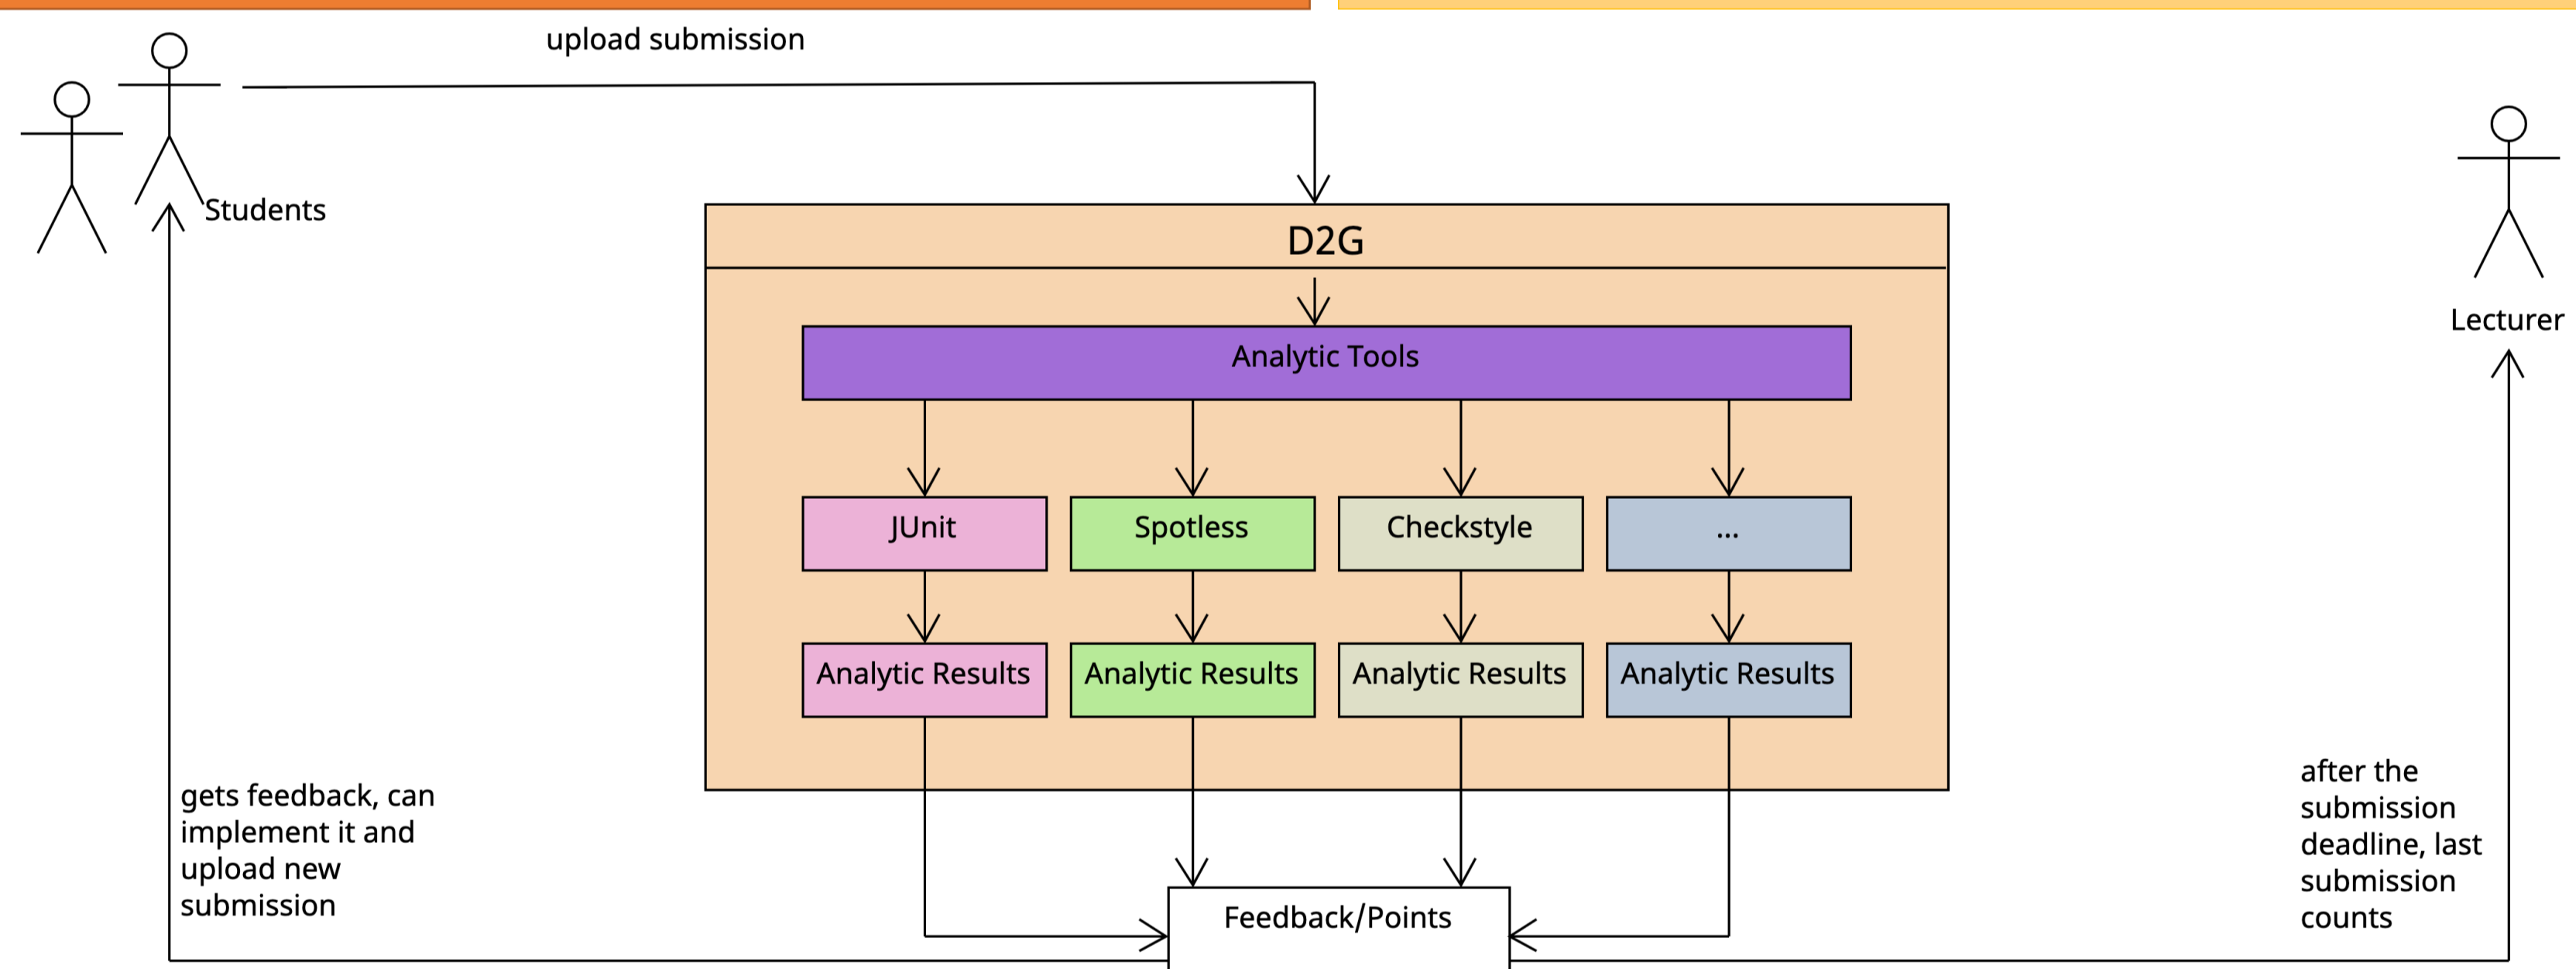

Create automated assessment tools to improve feedback in self-directed learning and reduce workload for lecturers

The Problem

- High quality feedback is time consuming
- Due to the time needed to correct exercises, manual feedback is (greatly) delayed to the submission

What is D2G?

- Automated tool for creating feedback for student submissions
- Uses existing analytics tools
- Creates detailed feedback without time delay

Advantages of D2G

- Quick/Easy self-check for students
- Time-saving feedback loop
- More time for quality questions in sessions

Limits of D2G

- Tools for automated analysis are needed
 - eg. unit testing, formatter...
- Solution-oriented testing, not comprehension-oriented
